

# Datamuse

---

## Provides:

This API provides the ability to search for words by giving conditions.

## Key Provisioning:

**Pain factor** (0=easy...5=nightmare): 

- No key is needed, but you can request one for free in order to exceed the daily quota.
- Procure a key by describing your planned usage of the API [here](#)

## Quotas:

- 100,000 requests / day
- 

## The Good:

- Very wide range of searches.
  - Words that mean ....
  - Words that sound like ...
  - Words related to ....
  - Words that rhyme with...
  - Much more, I suggest taking a look at the docs.
- Can also return Spanish vocabulary and words in Wikipedia article titles

## The Bad:

- Returns an extra “score” key-value pair that has no actual meaning (only for the API’s internal ranking purposes)

## The Ugly:

- Alternate spellings of the same word are returned as separate words
- Some words returned are not real words
